World Population by Country and Region, 1950-86, and Projections to 2050. By Francis Urban and Philip Rose. Agriculture and Trade Analysis Division, Economic Research Service, U.S. Department of Agriculture. Staff Report No. AGES880308.

ABSTRACT

This report contains estimates of world population for 1950 to the mid-1980's, depending on the latest country census, and projections to the year 2050. The data show the world population expanding from an estimated 5.1 billion in 1988 to 6.2 billion in the year 2000 and 10.8 billion in 2050. The information is provided for 204 countries, grouped into 14 geographic regions. It is a part of the Bureau of the Census population data bank used in the Economic Research Service (ERS). The data are electronically accessible to ERS and other analysts.

Keywords: Population, population estimates, population projections, countries, regions.

ACKNOWLEDGMENT

We are indebted to Dr. Peter D. Johnson, Chief, Systems Analysis and Programming Staff, Center for International Research, Bureau of the Census, U.S. Department of Commerce, for keeping us informed of periodic changes in the world population data and making the series available to ERS.

World Population by Country and Region, 1950-86, and Projections to 2050

Francis Urban
Philip Rose

INTRODUCTION

This report contains estimates of world population for 1950 to the mideighties and projections to the year 2050. The estimates are based entirely on the latest data provided by the Bureau of the Census, U.S. Department of Commerce. The data cover 204 countries and 14 geographic regions. All data are annual to 1990 and then in 5-year intervals to 2050. Data are shown in thousands, without decimals, since there are many countries where a decimal point would represent a spurious accuracy.

Historical population series and some projections are available from a variety of sources, including the United Nations, Population Reference Bureau, Bureau of the Census and national governments. Because of serious differences among data sources, which often create problems of consistency in analytical efforts, this document has been prepared in hard copy and machine-readable form to eliminate such problems in ERS analyses.

Countries and geographical units in this paper are generally the same as in the Bureau of the Census statistics. In particular, the Peoples Republic of China and Taiwan (Republic of China), as well as Greenland were retained as separate units. Similarly, Western Sahara (formerly Spanish Sahara), the West Bank and Gaza Strip remain separate units. However, the population of Faeroe Islands was included in that of Denmark, and the populations of the Channel Islands and the Isle of Man were included in the United Kingdom.

This is the third issue of our World Population series. The first one was dated May 1984 and the second March 1987. While the historical series depended mainly on the Bureau of the Census data, the projections in the first issue were made by the authors using either the World Bank data, if available, or our own estimated future growth rates. In the second and the present issues, both the historical series and projections are those of the Bureau of the Census.

The successive re-issues of the World Population since 1984 were necessitated by drastic revisions in the series by the Bureau of the Census in 1986, and then again in 1987, and by continuing changes in the

political map of the world. The most recent changes, for instance, include the separation of Aruba, now an independent state, from the Netherlands Antilles and of Mayotte, a French dependency, from the independent state of Comoros. Also, the U.S. Trust Territory of the Pacific Islands was gradually dismantled between 1986 and 1988, forming the Northern Marianas, now a U.S. Commonwealth, and the Federated States of Micronesia and Marshall Islands, now both U.S. Freely Associated States. As of this writing only Palau remains a Trust Territory but is expected to achieve the Freely Associated State status by the end of 1988.

The data shown in this report represent a part of the population information on the International Data Base (IDB) machine-readable file acquired from the Bureau of the Census and maintained in ERS by the Data Service Center. Other information in the file includes population distribution by sex and age group, urban and rural population, economically active population by age, sex, and industry: life expectancy, school enrollment, and other information. It is electronically accessible to analysts in USDA. For additional information please contact Larry Otto, Philip Rose (202/786-1602), or Francis Urban (202/786-1705).
